# Holographic Pancake Optics for Thin and Lightweight Optical See-through Augmented Reality: supplemental document

The see-through transmission was measured with an unpolarized source using an NDK haze meter to be 27.9% in the combiner region and 88.4 % outside of the combiner region of the optic. The optical see-through transmission measurement of the holographic pancake optics across the visible spectrum is shown for both the combiner region and the lightguide in Fig. S1.

**Fig. S1.** Optical see-through holographic pancake transmission across the visible spectrum.
